

SSS EGG COLLECTOR
3 & 4-HI -- 2" & 4" EGG BELT
*Including installation instructions,
operation, and parts lists*

When ordering parts, Remember. . .

All parts should be ordered by **PART NUMBER** and **DESCRIPTION** as given in the **PARTS LIST**

Parts are always billed when shipped. If a returned part is defective, and within warranty period, credit will be allowed against billing.

CHECK SHIPMENT FOR DAMAGES AND SHORTAGES.

All claims for damages or shortages resulting from shipment must be filed with the carrier.

Electrical Wiring Notes. . .

Disconnect electrical power before inspecting or servicing equipment unless maintenance instructions specifically state otherwise.

Ground all electrical equipment for safety.

All electrical wiring must be done by a qualified electrician in accordance with local and national electric codes.

Ground all non-current carrying metal parts to guard against electrical shock.

With the exception of motor overload protection, electrical disconnects and over current protection are not supplied with the equipment.

PLEASE read the installation instruction prior to beginning the installation.

The collectors MUST be installed properly to insure proper operation of the cross conveyor equipment.

CAUTION

Guards and covers are installed on the equipment for your safety. Disconnect power prior to removing guards and covers when servicing the Egg Collectors.

Thank-you for purchasing a Chore-Time SSS Egg Collector!

This instruction will provide you with the necessary information for installation, wiring, and operation of the collectors. Read it carefully prior to beginning the installation.

Notice the wiring notes on the wiring diagrams. Wiring should be done by a qualified electrician, in accordance with local and national electrical codes.

||||| This bar denotes changes made to this instruction since the last printing. It will appear in the left or right hand border, near the revised information.

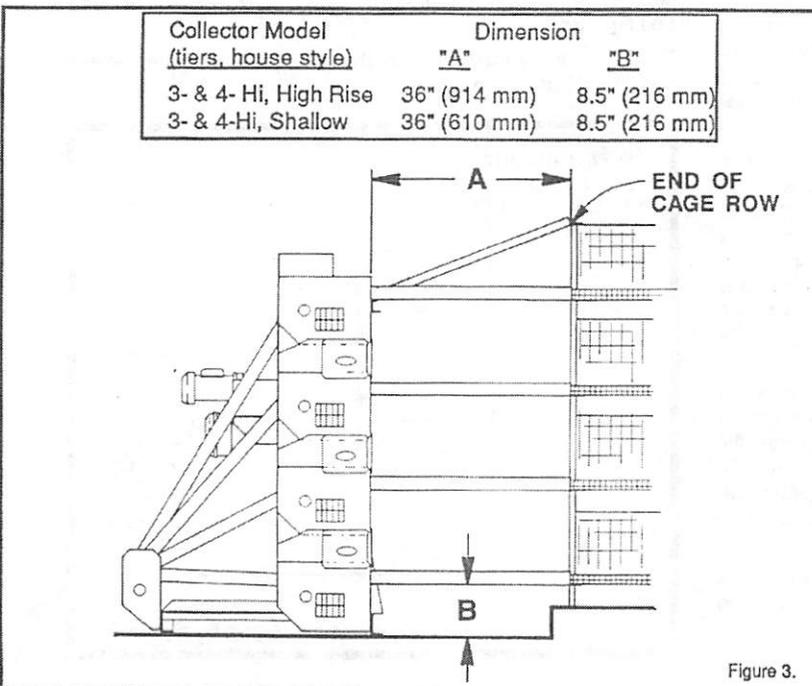

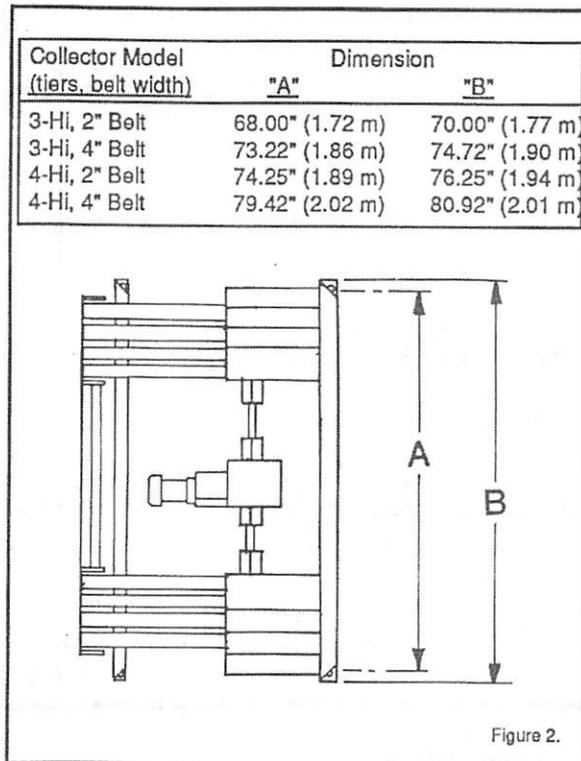

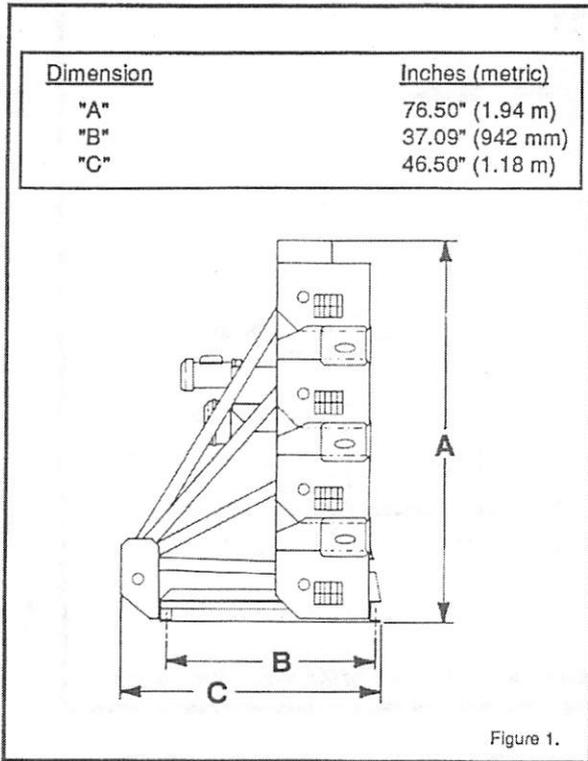

Planning the System

Dimensions are shown for the 3-high & 4-high SSS Egg Collectors in Figure 1 and Figure 2. Use these dimensions when planning the collector and cross conveyor installation.

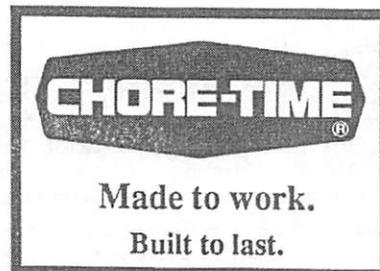

All SSS Egg Collectors require a minimum of 48" (1.22 m) to move the unit through a door of an existing building.

SSS Collectors require anchor spacing as shown in Figures 1 & 2. Note that this spacing is different than the required spacing for cage floor supports. Figure 3 shows placement and dimensions required for installation to cage row and cross conveyor system.

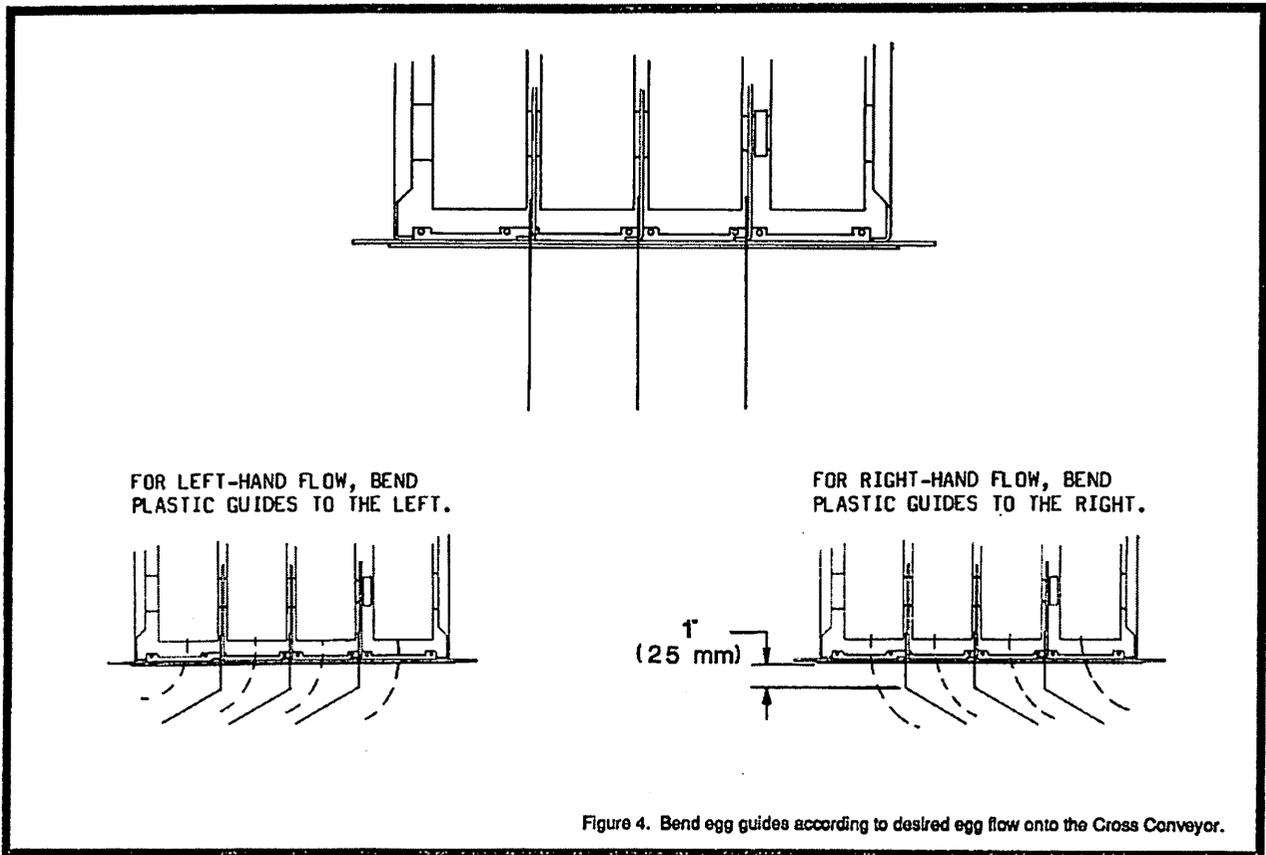

IMPORTANT

The dimensions shown in Figures 1, 2, & 3 are for reference and planning purposes only.

Installation of the Plastic Egg Guides

Before installation of the collectors, prepare the egg guides on the front of the collector according to the intended direction of egg flow onto the cross conveyor. Each collector is manufactured with plastic egg guides installed for egg flow in either direction. All plastic egg guides are to be bent approximately 1° (25mm) from the egg collector in the direction of the egg flow. See Figure 4.

Position the Egg Collectors

INSTALL THE EGG COLLECTORS ON THE TWO OUTER CAGE ROWS IN THE HOUSE (ROWS NEAREST TWO OUTSIDE WALLS) FIRST. Then, after these collectors are placed, install the collectors between these units so that they are in-line and cross conveyor equipment can be easily installed.

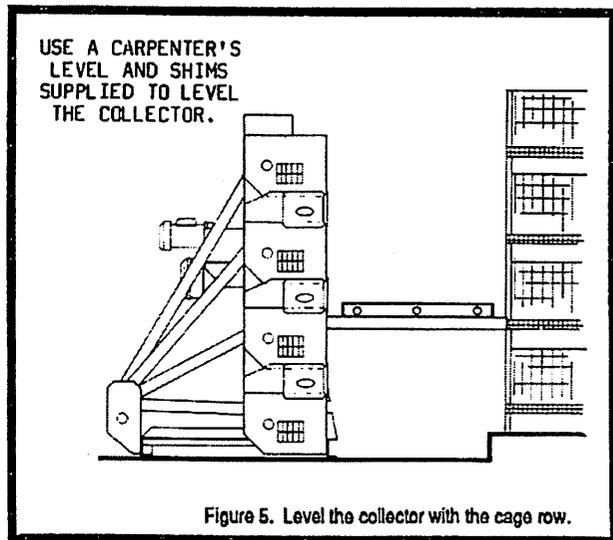

Position each Egg Collector on the supports, in roughly its final position. Dimensions are shown in Figures 1, 2, and 3 for reference in planning and installing the system. See Figure 3 for dimensions between collector module and end framing. For distance from the first cage support to the center of the cross conveyor tray and distance from the edge of the cage floor stand to the front edge of the cross conveyor, see Figure 3. Observe the collector dimensions and placement requirements carefully when positioning the unit.

Align all collectors at front for installation of the cross conveyor equipment. It's easiest to determine this location, then snap a chalk line and use it to position the egg collectors. Install the "outside" collectors first, then use them to help align the remainder of the units. IT IS IMPORTANT TO ALIGN THE FRONT OF THE COLLECTORS. Otherwise, installation of the cross conveyor tray and cross conveyor egg belt will be difficult.

Temporarily install the bottom line egg trays and tray extensions on both side of the collector. The egg trays are shipped in the egg collector assembly kit.

Use a carpenter's level and shims (shims are provided in the assembly kit) to level the machine front-to-back and side-to-side. See Figure 5.

Drill holes for lag screws and anchor the collector securely after it is level and in its final position.

Install Egg Trays

Install the egg trays and extensions connecting the cage row to the collector. Tabs on the egg trays hook under cage egg tray. See Figure 6. NOTE: Bend the tip of the egg tray slightly to "nose" it under the egg tray wire. Bend the tabs to hold egg tray to the cage wire.

Use 10-24 machine screws and hex nuts to attach the trays to the collector entrance. The Belt Riser attaches inside the Egg Tray on the aisle side of the Egg Tray with two 10-24 machine screws. See Figure 7.

Fasten the egg sweep to the egg tray as shown in Figure 7. The sweeps help single file the eggs as they go into the de-escalator. Note: The Egg Sweeps and Belt Risers are only needed in 4" Belt installations.

Egg Tray Extension Installation

Egg Tray Extensions are used when the Egg Trays will not reach the de-escalator as shown in Figure 8.

1. Hook the Egg Tray to the cage Egg Tray, then fasten the Egg Tray Extension to the collector.
2. Lay the Egg Tray into the Egg Tray Extension. Then use the holes in the Egg Tray for a guide in drilling the holes in the Egg Tray extension. Bolt the two trays together with 10-24 Truss Head Machine Screws.

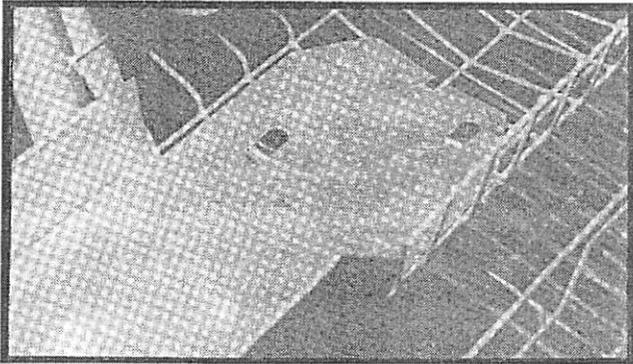

Figure 6. Egg Tray fastened to Egg Tray Wire.

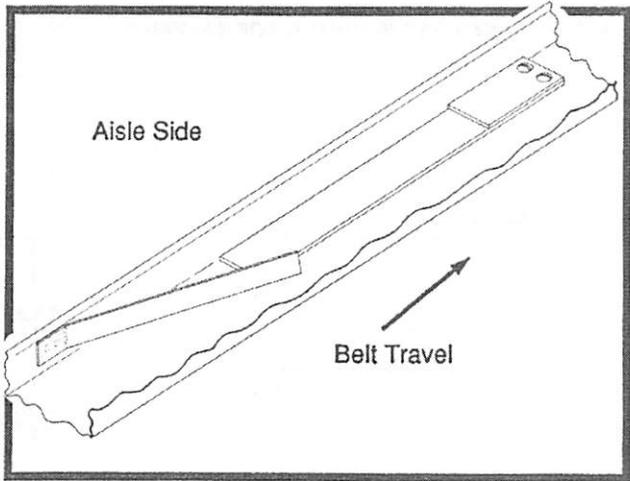

Figure 7. Egg Sweep Installed in Egg Tray.

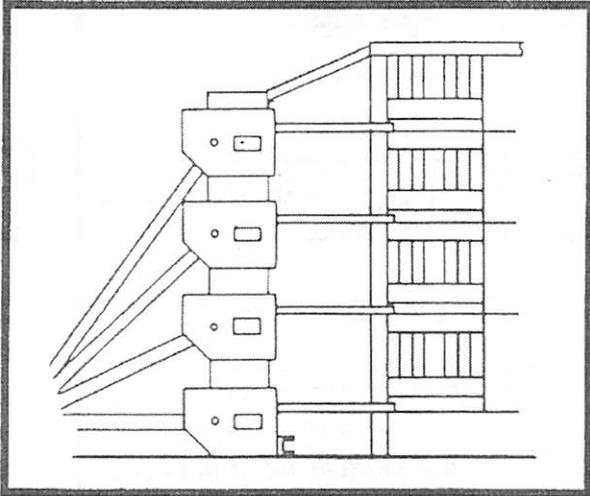

Figure 8. Egg Tray Extensions and Collector End Framing diagram.

Install the Collector End Framing

Installation of the collector end framing for the 3-Hi and 4-Hi SSS Collector is the same. Install the framing as shown in Figure 8. Place washers over the slots in the end framing during framing assembly.

REAR RETURN FRAMING INSTALLATION

FeedKar Cages and Dropping Board Scrapers

The installation of the rear return framing of the 3-Hi and 4-Hi SSS Collector for FeedKar cages with Dropping Board Scrapers is similar. Refer to the appropriate 3-Hi or 4-Hi diagram in Figure 9 for proper installation.

1. Loosely bolt a Rear Return Mounting Plate and an Adjusting Plate with 5/16" bolts at locations shown in Figure 9.
2. The Rear Return Bottom Cross bolts to the bottom of the two Rear Return Legs. The Rear Return Top Cross, the Rear Return Inter Top Cross, and the Rear Return Inter Bottom Cross attach to the Rear Return Mounting Plate and Rear Return Leg as shown in Figure 9.
3. Tighten all Rear Return Framing hardware.

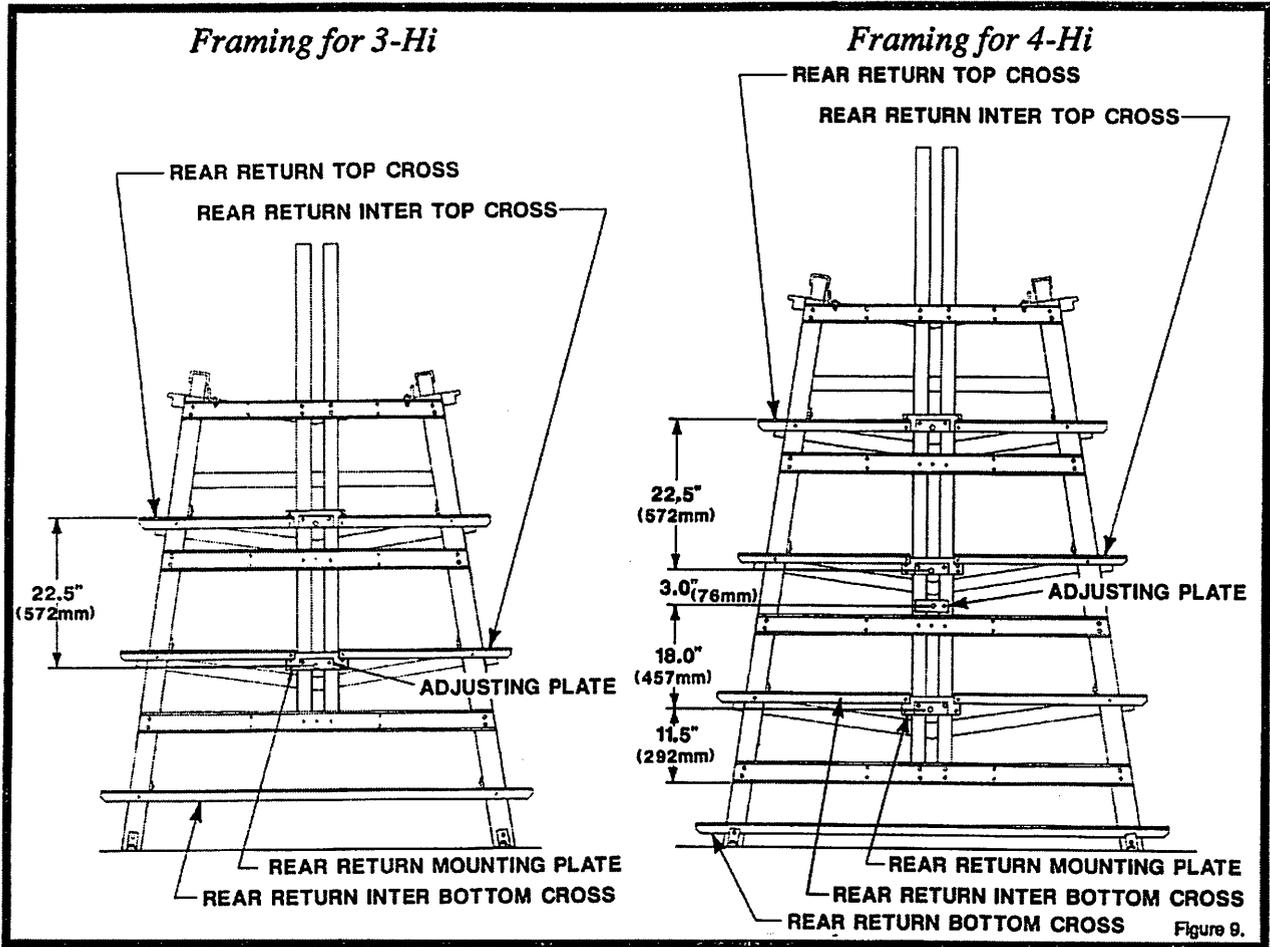

Figure 9.

Ultraflo Curtain Back Cages

The Rear Return Top Cross, the Rear Return Inter Top Cross, the Rear Return Inter Bottom Cross, and the Rear Return Bottom Cross bolt to the Rear Return Leg as shown in Figure 10.

Rear Return Assembly Installation

Use two 5/16" carriage bolts, washers, and nuts to install the Rear Return Assemblies to the Rear Return Extensions. The Rear Return Extensions are then installed on the Rear Return Crosses as shown in Figure 11. The Rear Return Assembly and the Rear Return Extension should be installed so that the belt pulls up against the belt scraper as it comes out from beneath the egg tray. See Figure 12. Be sure to install the Rear Returns on the correct side of the cage row. The belt scrapers are angled so that the scrapings are pushed toward the pit. See Figure 12.

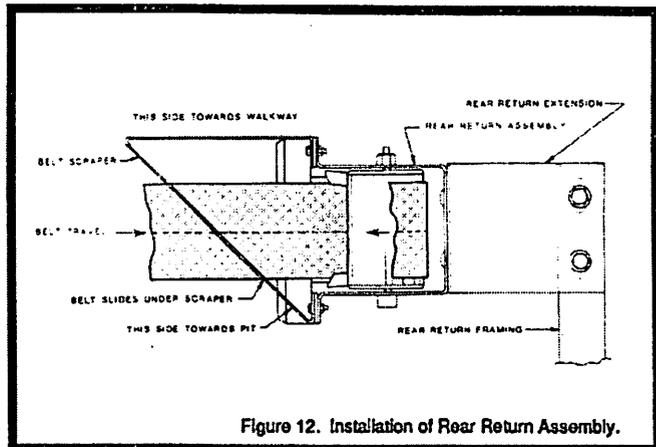

Figure 12. Installation of Rear Return Assembly.

Framing for 3-Hi

Framing for 4-Hi

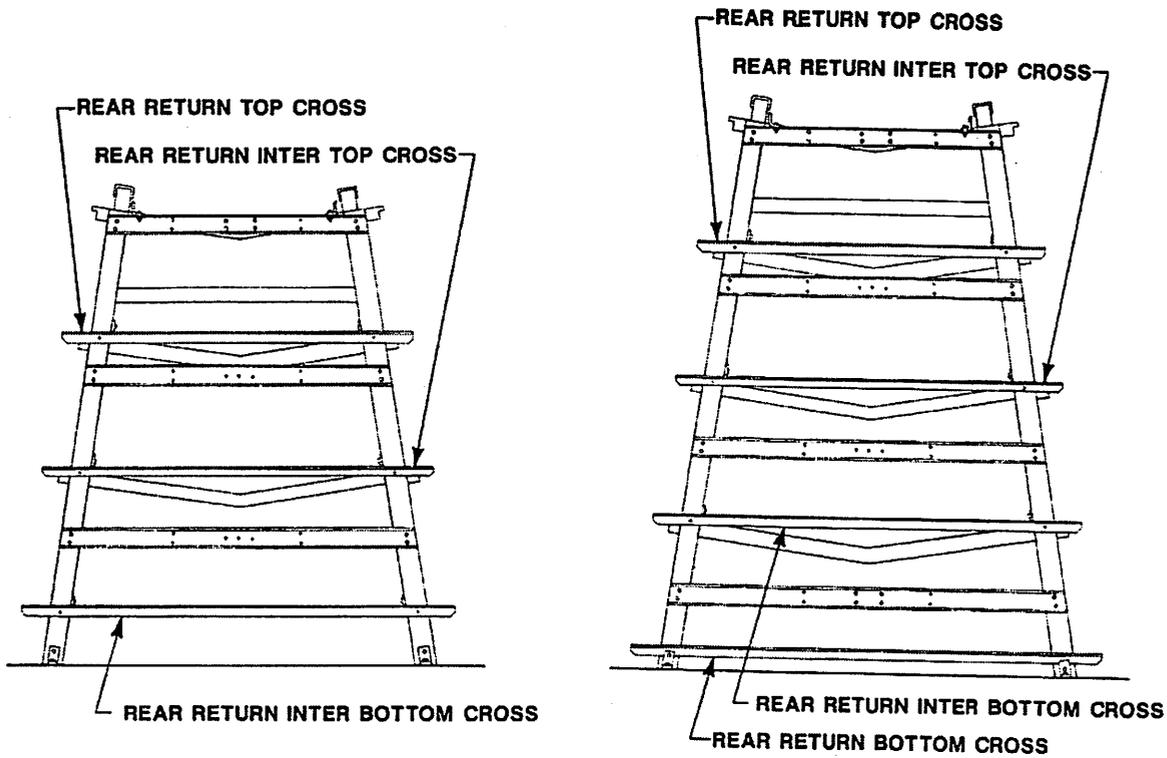

Figure 10.

Rear Return Assemblies for 3-Hi

Rear Return Assemblies for 4-Hi

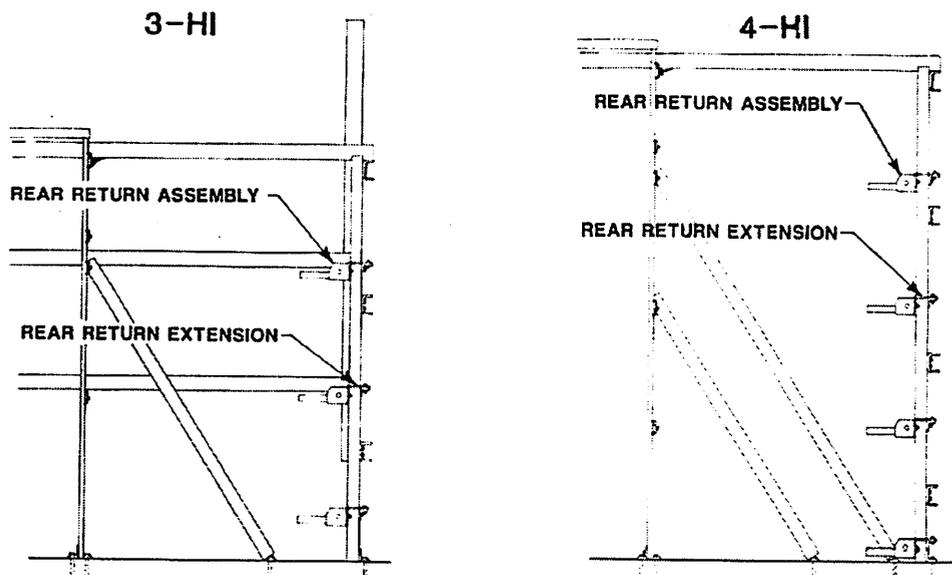

Figure 11.

Installation of Egg Belt

1. Unroll the Egg Belt in the Egg Tray. Thread the belt around the Rear Return Roller and pull the belt back to the collector beneath the Egg Tray.
2. Thread the Egg Belt through the egg collector as shown in Figure 13.
3. Install Belt Return Clips on all cage rows after Belt is installed. Install a Belt Return Clip ONE CAGE PARTITION FROM EACH END OF THE CAGE ROW; then, beginning at the Collector end of the line, install a clip at the first partition PAST each cage floor support. Install Belt Return Clips on All Cage Rows. Belt Return Clip should be installed so that belt travel holds it in position. See Figure 14 for proper installation.

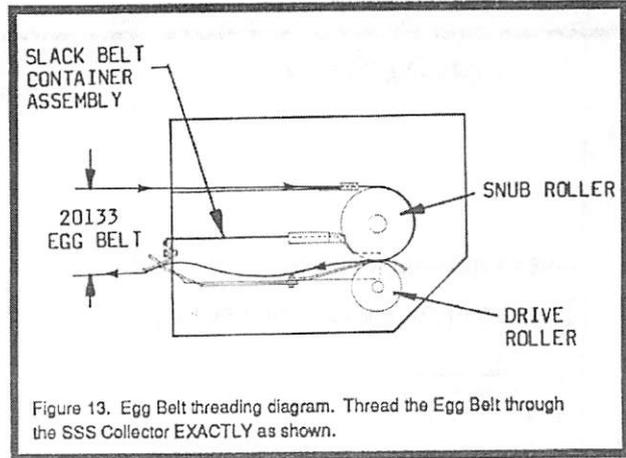

Figure 13. Egg Belt threading diagram. Thread the Egg Belt through the SSS Collector EXACTLY as shown.

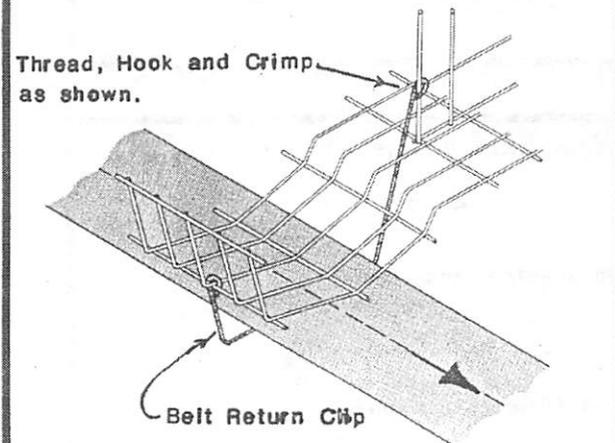

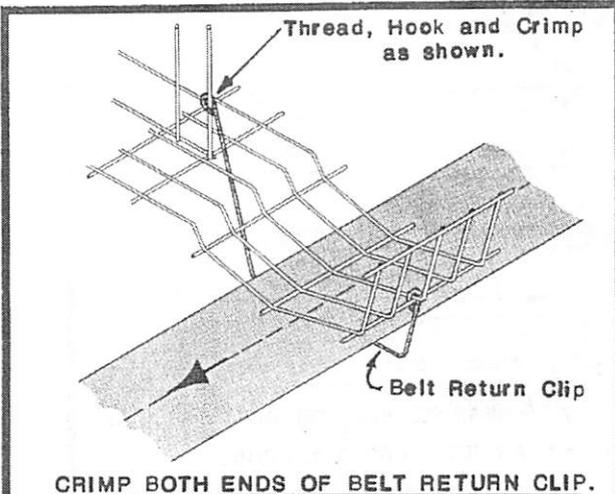

Figure 14. Thread and hook Belt Return Clip as shown so that belt travel hold it in position.

4. Stretch the belt by hand. THE BELT SHOULD BE STRETCHED 1/2% OF THE BELT LENGTH, OR 6" (152 MM) OF STRETCH PER 100' (30 M) OF BELT.
5. Cut and sew the belt.
 - A. Trim the belt to a rounded point. See Figure 15.
 - B. Overlap the ends of the belt 4" (100 mm) as shown in Figure 15. There must be 4" (100 mm) of FULL WIDTH BELT OVERLAP!
 - C. Sew the belt. Be sure the two ends are in line so that the belt will not be crooked. BE SURE THE ENDS OF THE BELT ARE COMPLETELY STITCHED DOWN!
 - D. Apply PVC glue over the stitched down ends of the belt to help prevent the belt from unraveling.

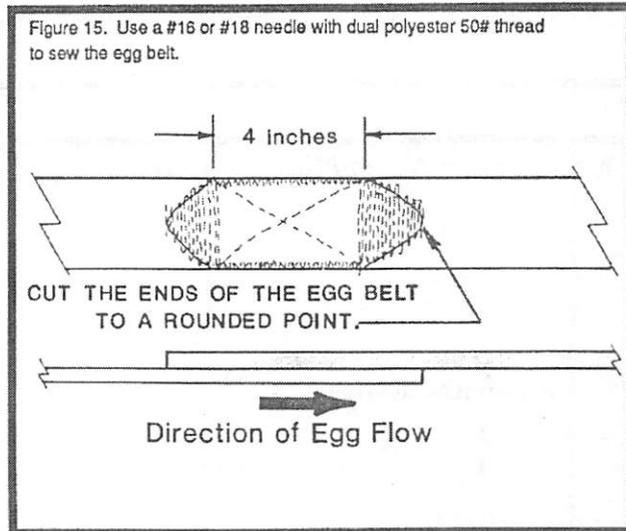

Figure 15. Use a #16 or #18 needle with dual polyester 50# thread to sew the egg belt.

SSS Egg Collector
3-Hi and 4-Hi
2" and 4" Belt

Egg Tray Brace Installation

Install an Egg Tray Brace at the rear return end of the cage egg tray. Use extra ferrules to attach the brace as shown in the appropriate Figure 16A or 16B.

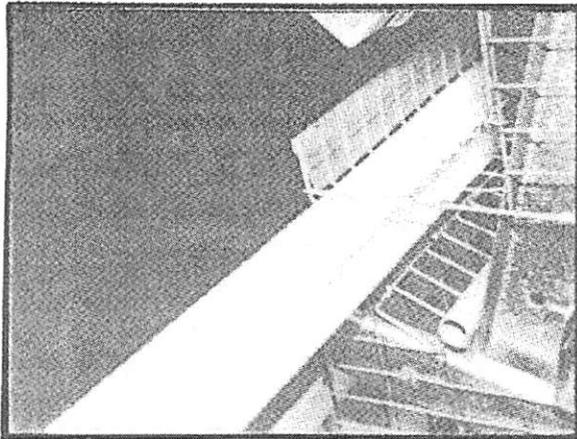

Figure 16A. 2" Idler End Belt Guide

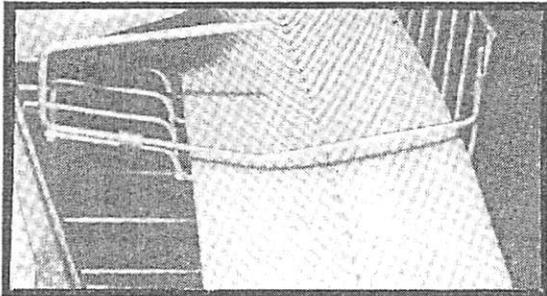

Figure 16B. 4" Egg Tray Brace

Install Egg Sweep Braces and Egg Sweep Cross Braces

Install four egg sweep braces and two cross braces on each collector; two per set of de-escalators as shown in Figures 17 and 18. Use hardware as shown.

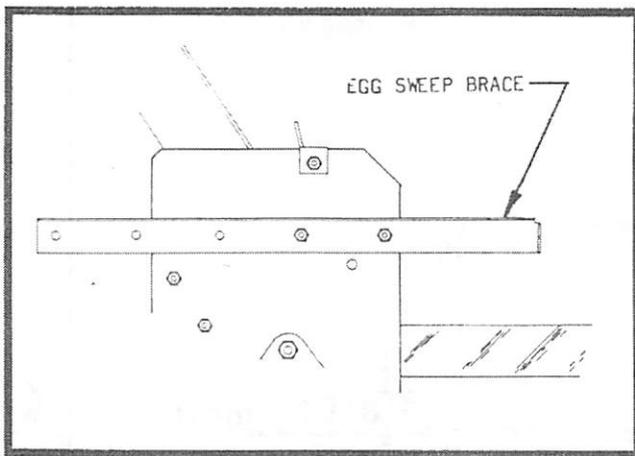

Figure 17. Install Egg Sweep Braces at each de-escalator

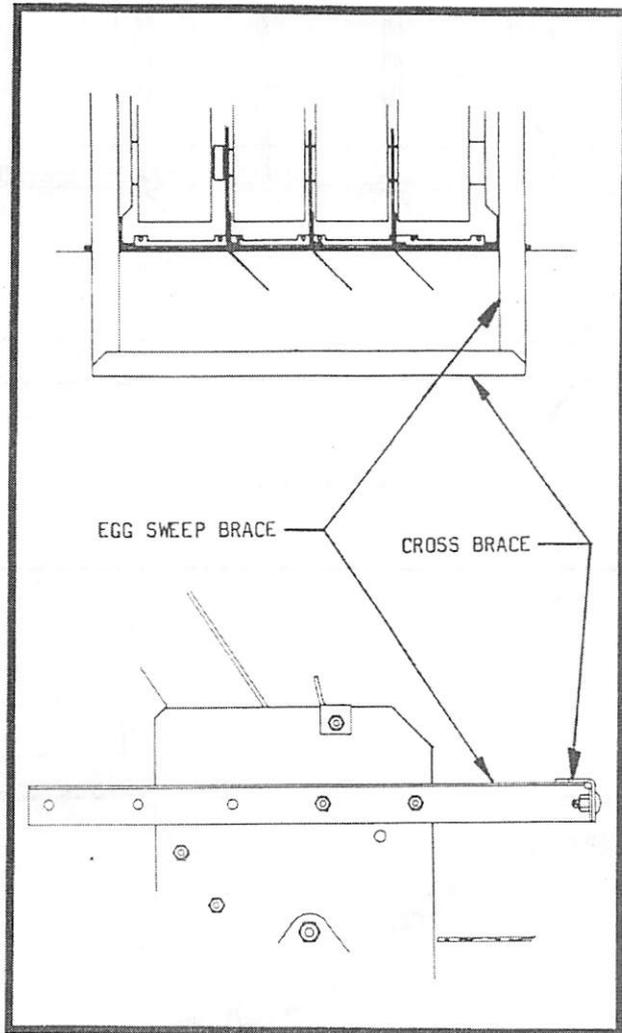

Figure 18. Install Cross Brace at each de-escalator

Install the Egg Sweeps

Install plastic egg sweeps as shown in Figure 19. Only attach to the cross brace at the two locations shown. The bottom of the plastic egg sweeps should be 5/8" (15 mm) above the cross conveyor.

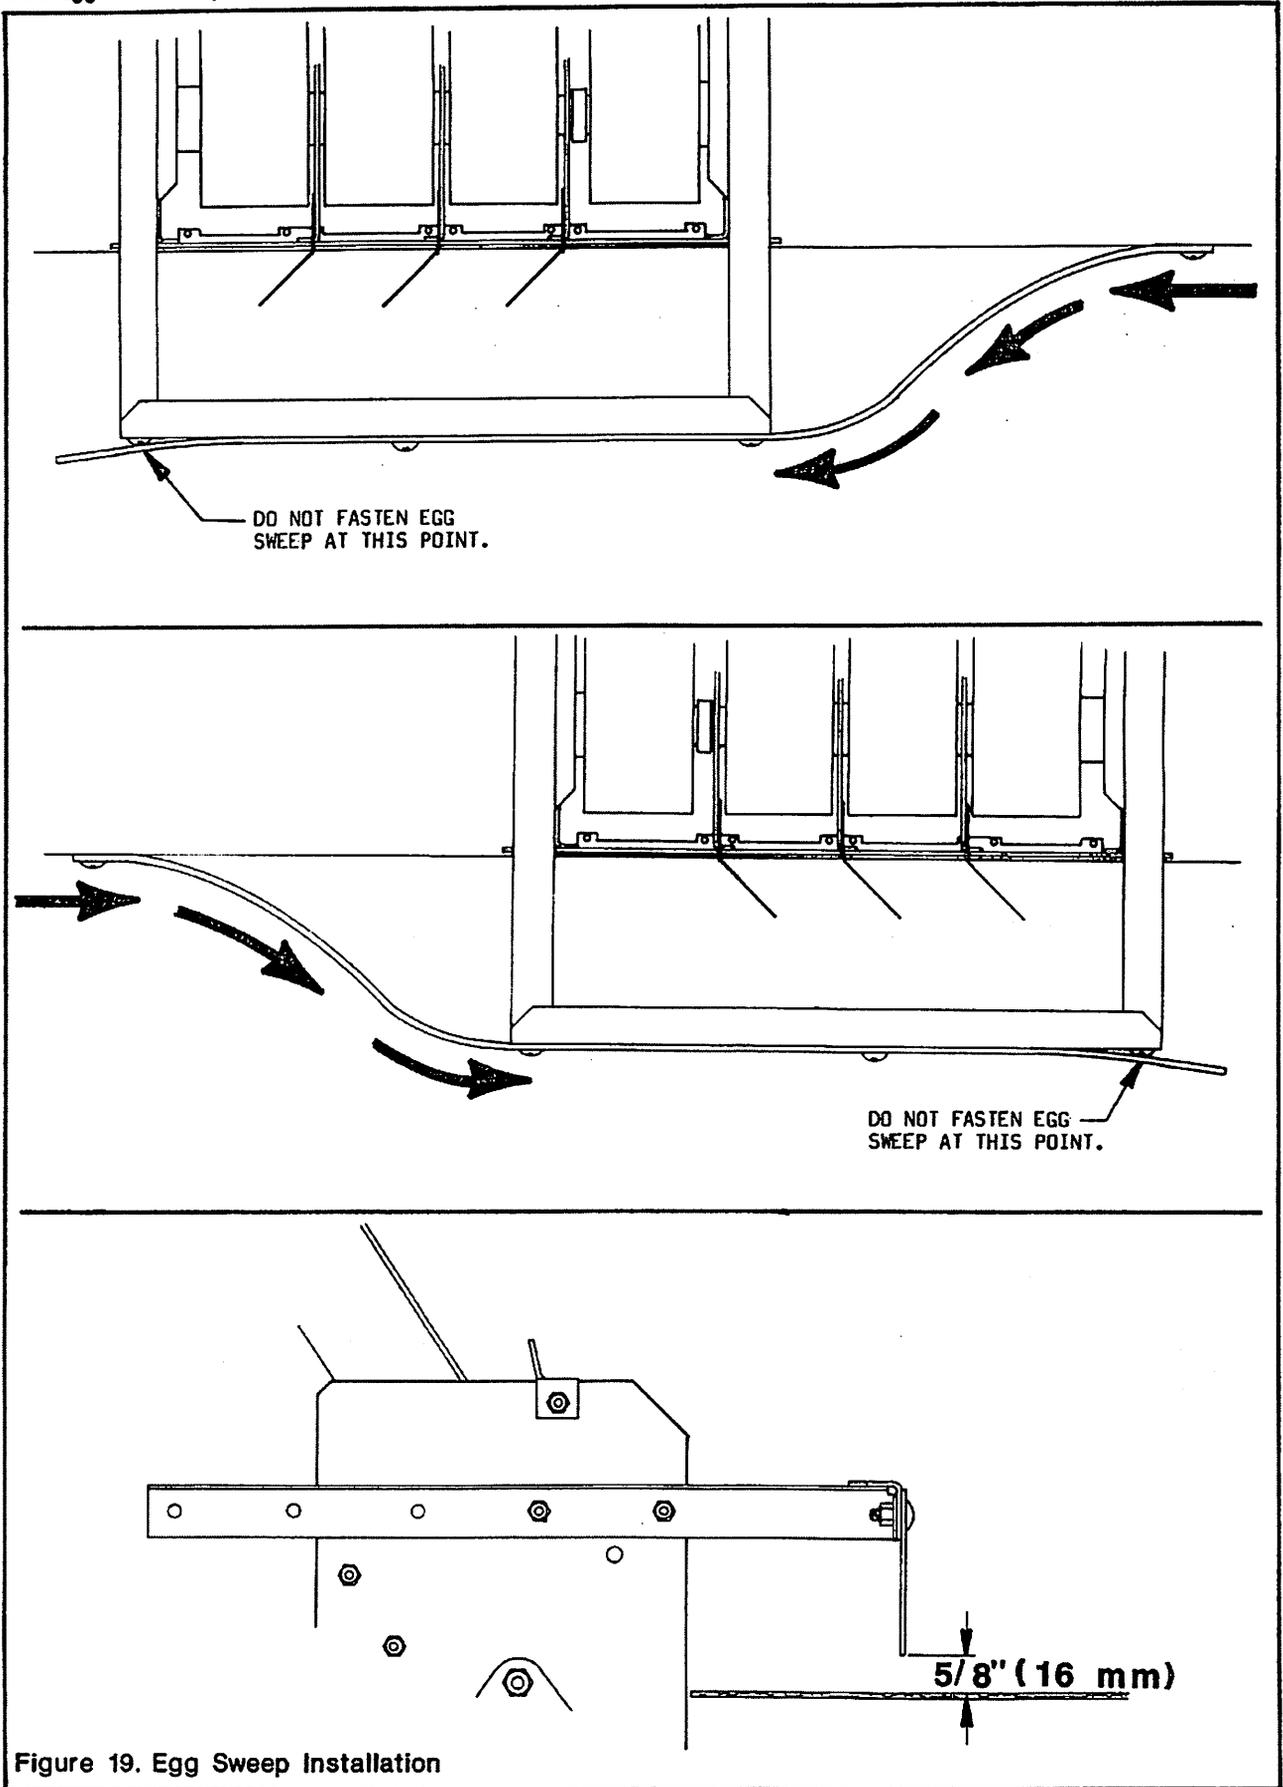

Figure 19. Egg Sweep Installation

Rod Transfer Kit

The Rod Transfer Kit is used with the SSS Collector when a rod-type cross conveyor is used.

See the instructions packed with the Rod Transfer Kit for proper installation.

Install the Controls

Cross conveyor system and flow control installation is covered in Chore-Time Manual ME626/the Cross Conveyor Equipment Operator's Manual. The manual also contains information for installation and field wiring of egg collector controls. Use wire of adequate size. All electrical wiring should be done by a qualified electrician in accordance with local and National Electrical Codes. Ground all electrical equipment.

Three Phase Controls

On collectors with three phase motors, the motor voltage and motor rotation must be set by the electrician at the job site.

Egg Counter Control Box

Use water-tight connectors on the Counter Junction Box and Counter Box Assembly. The reliability of the counters depends on a dry, clean environment inside the boxes. Note: The warranty is voided if water tight connectors are not used. A 20 gauge, 9-conductor wire that meets local and national electric codes is recommend to connect the Counter Junction Box to the Counter Box Assembly.

CAUTION When fastening the wire to the building or equipment, do not:

- kink the wire
- place it against sharp objects
- short the wire by installing metal straps or staples so that they cut the insulation
- route the wires anywhere the birds can reach them

The counter may be reset using the red button on the front of each counter. **DO NOT RESET THE COUNTER WHILE THE COLLECTOR IS OPERATING.**

Use only Dura-cell ("D" size) batteries for replacement of the power supply. Replace the batteries in the position indicated by the decal.

RECOMMENDATIONS AND GUIDELINES FOR OPERATION

A control switch on the egg collector and cross conveyor power unit has two operating positions, in addition to the "off" position. Each of these positions....."manual" and "remote" has a specific purpose.

Manual operation permits each collector to operate independently. This is used most commonly for servicing the equipment.

Remote operation ties the egg collectors and cross conveyor equipment into the master control panel. Individual collectors and the cross conveyor can start and stop as needed. Flow controls installed on the cross conveyor tray control collector operation according to the volume of eggs.

Operation of the cross conveyor is controlled by the master switch on the Master Control Panel.

MAINTENANCE RECOMMENDATIONS

! IMPORTANT !

1. Ground all electrical equipment.
2. All electrical wiring should be done by a qualified electrician in accordance with Local and National Electrical Codes.
3. Use wire of adequate size.
4. Keep all guards and shields in place.
5. Disconnect electrical power before inspecting or servicing the equipment!

DAILY MAINTENANCE

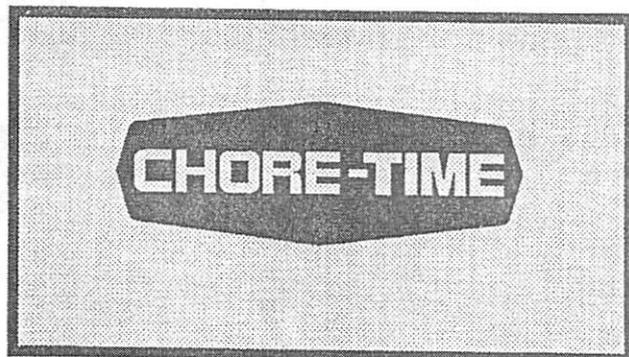

1. Before operating the equipment, check all lines to be sure nothing is blocking the egg belts.
2. Observe the Rear Returns while making daily rounds. All belts should track straight through the Rear Returns. Adjust if necessary.
3. Turn each machine to "Manual" switch position to check for blown fuse/the fuse is blown if the indicator lights.
4. Check flow controls for satisfactory operation.

WEEKLY MAINTENANCE

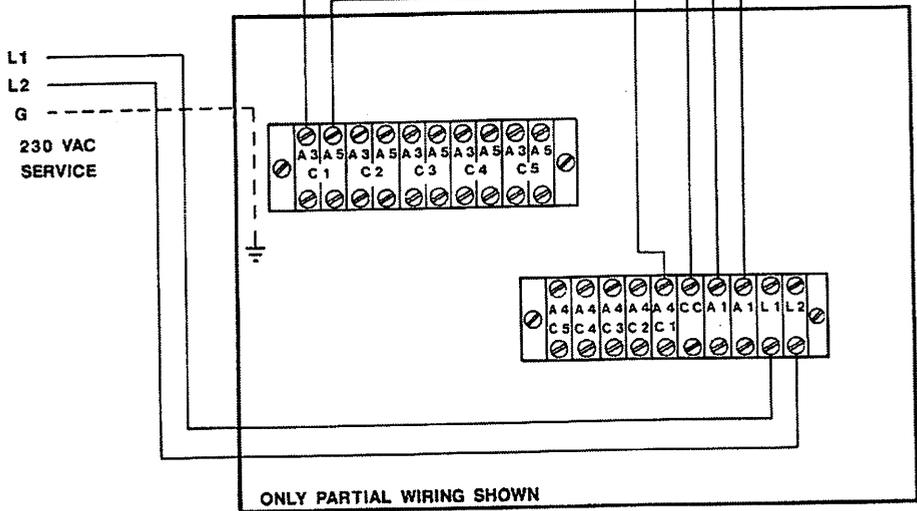

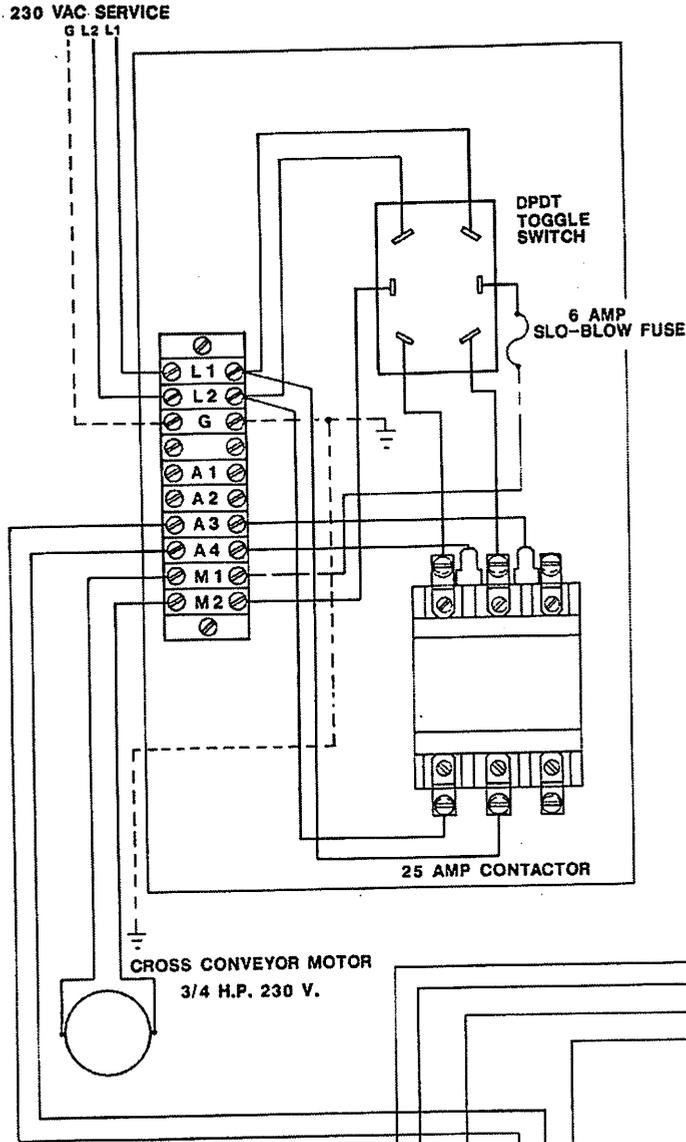

1. Check Egg Collector De-Escalators for tracking and alignment. Adjust if necessary.
2. Clean the collector carefully. Do not allow dirt or feathers to build up on the collector equipment.

MONTHLY MAINTENANCE

1. Check for dirt build-up around the collector power unit. Clean as needed.
2. Check for dirt build-up under the cross conveyor belt in front of each machine. Clean as needed.
3. Clean idler end framing.
4. Oil drive chains on the collector.
5. Adjusting the Tracking. If an Egg Belt tracks incorrectly, loosen the bolts holding the bearing in place on the side of the Modules. Since the belt will track in the direction it's tightest, adjust the bearing accordingly and tighten bearing bolts.

WIRING NOTES

1. Cross Conveyor terminal, CC, is controlled by the Master Switch.
2. Collector terminals, C1, C2, etc., are controlled by the corresponding switches.
3. All unit Control Circuits are 24 Volt.
4. All Cross Conveyor and Side Conveyor Power Units are controlled from terminals CC and A1.
5. Connect in white box under Collector Power Unit.
6. Machine is factory wired for use w/o Flow Controls. Where Flow Controls are to be used, remove wire nut from wire 3 and slack belt wire. Next, connect wire from slack belt to common of Flow Controls. Wire 3 will go to normally closed of the Flow Controls. Wire 5 will go to normally open of the Flow Controls.

WARRANTY INFORMATION

Chore-Time Equipment warrants each new product manufactured by it to be free from defects in material or workmanship for one year from the date of initial installation by the original purchaser. If such a defect is found by Chore-Time to exist within the one year period, Chore-Time will, at its option, (a) repair or replace such product free of charge, F.O.B. the factory of manufacture, or (b) refund to the original purchaser the original purchase price, in lieu of such repair or replacement.

Additional extended warranties are herewith provided to the original purchaser as follows:

1. RLX Fans, less motors, for three years from date of installation.
2. Poultry feeder pans that become unusable within five years from date of installation. Warranty prorated after three years usage.
- *3. Rotating centerless augers, excluding applications involving High Moisture Corn (exceeding 18%), for ten years from date of installation. Applications involving High Moisture Corn are subject to a one year warranty.
4. Chore-Time manufactured roll-formed steel auger tubes for ten years from date of installation.
5. Laying cages that become unusable within ten years. Warranty prorated after three years usage.
- *6. ULTRAFLO® Auger and ULTRAFLO® Feed Trough (except ULTRAFLO® Trough Liners) are warranted for a period of five (5) years from date of original purchase against repeated breakage of the auger or wear-through of the feed trough.

Conditions and limitations:

1. The product must be installed and operated in accordance with instructions published by Chore-Time or warranty will be void.
2. Warranty is void if all components of a system are not supplied by Chore-Time.
3. This product must be purchased from and installed by an authorized Chore-Time dealer or certified representative thereof, or the warranty will be void.
4. Malfunctions or failure resulting from misuse, abuse, negligence, alteration, accident, or lack of proper maintenance shall not be considered defects under this warranty.
5. This warranty applies only to systems for the care of poultry and livestock. Other applications in industry or commerce are not covered by this warranty.

Chore-Time shall not be liable for any consequential or special damage which any purchaser may suffer or claim to have suffered as a result of any defect in the product. "Consequential" or "special damages" as used herein include, but are not limited to, lost or damaged products or goods, costs of transportation, lost sales, lost orders, lost income, increased overhead, labor and incidental costs and operational inefficiencies.

THIS WARRANTY CONSTITUTES CHORE-TIME'S ENTIRE AND SOLE WARRANTY AND CHORE-TIME EXPRESSLY DISCLAIMS ANY AND ALL OTHER WARRANTIES, INCLUDING, BUT NOT LIMITED TO, EXPRESS AND IMPLIED WARRANTIES AS TO MERCHANTABILITY, FITNESS FOR PARTICULAR PURPOSE SOLD AND DESCRIPTION OR QUALITY OF THE PRODUCT FURNISHED HEREUNDER.

Any exceptions to this warranty must be authorized in writing by an officer of the company. Chore-Time reserves the right to change models and specifications at any time without notice or obligation to improve previous models.

*See separate "WARRANTY ADDITION" as to these products
