

## Water Manifold Kits for Cage Rows over 600'

For cage rows over 600' in length, install the manifold components as shown in the diagrams below. Notice the 3/4" supply line supplies the entire cage row, but water pressure for each line is adjustable using the Pressure Regulator. A 3/4x1/2x1/2 Tee must be located after pressure regulator and gauge to supply both sides of each tier. Install a valve on each water line, as shown.
