

Selection of Correct Feed Level Tube for Control Units

Included with each control unit and intermediate control unit are both the standard and short feed level tubes. The standard feed level tube is used with the standard ATF deep pan. The short feed level tube is used with the shallow pan.

The short feed level tube must be used in the control units when the shallow pan is used. This is so the feed level tube will clear the control switch.

Refer to the drawing below to identify the different pans and feed level tubes.

Place feed level tube in pan with end closest to guide slots positioned up.

#4194 Standard Feed Level Tube

#4341 Short Feed Level Tube

#4193 Standard Deep Pan

#6597 Shallow Pan
