

CHORE-TIME® EXCELSIOR® Egg Collector for VERSA® PLUS System

Let's grow together®

Handles the Larger Capacity Demands of Today's Houses

Chore-Time's EXCELSIOR® High-Capacity Collector can collect eggs from up to 16 tiers at once.

As eggs move from egg belts across a mini rod conveyor, trash drops through before eggs enter collector baskets.

Easily removable trays below the mini rod conveyor collect foreign matter.

EXCELSIOR® Collector Advantages

- **Greater capacity** – holds more eggs per row of baskets, offers collection of all tiers at once and can be taller than earlier Chore-Time collectors.
- **Greater flexibility** – variable collection speed options and various discharge heights.
- **Cleaner eggs** – most trash exits the system before eggs reach the baskets.
- **Easier-to-maintain** collector with stronger basket structure.

Adaptable Operation

- Collector's mini rod conveyor is powered by the egg belt drive motor, while the baskets are run by an independent motor. A variable speed option is available for both motors.
- Accepts 3.8- or 4.9-inch (9.5- or 12.4-cm) egg belts.
- Ideal for new construction or retrofit of older buildings.

Cleaner Eggs

- Feathers and other foreign matter drop off the egg belt and through the collector's mini rod conveyor into easily removable trays before eggs reach the baskets.

Easy Maintenance

- Baskets are fastened with an easy-to-replace connecting rod.
- Space-saving rows of baskets are horizontal rather than angled regardless of cage configuration.
